DETAILED ACTION

Allowable Subject Matter

Claims 43-68 are allowed.

Reasons for Allowance

Claims 43-68 are allowed since there is no prior art of record that teaches or suggests a liquid crystal display and a method of manufacturing thereof comprising a relationship of various elements as claimed with the specific allowable subject matter cited in the following claims:

Claim 43:

- a first panel including a conductive member including a light transmitting portion
- a second panel spaced apart from the first panel by a predetermined gap and including a black matrix
- a sealant disposed between the first panel and the second panel and overlapping the black matrix, the light transmitting portion disposed at the overlapping
- wherein the conductive member comprises a connector for signal transmission between the data driving circuit and the gate driving circuit

Claims 44-55 are allowed since they depend on the allowed claim 43.

Claim 56:

- a first panel including a conductive member including a light transmitting portion

- a second panel spaced apart from the first panel by a predetermined gap and including a black matrix
- a sealant disposed between the first panel and the second panel and overlapping the black matrix, the light transmitting portion disposed at the overlapping
- wherein the conductive member comprises a connector transmitting signals between the data PCB and the gate PCB and overlapping the sealant and the black matrix

Claim 57:

- a first panel including a conductive member including a light transmitting portion
- a second panel spaced apart from the first panel by a predetermined gap and including a black matrix
- a sealant disposed between the first panel and the second panel and overlapping the black matrix, the light transmitting portion disposed at the overlapping
- wherein the first panel further comprises a first signal line for signal transmission with the gate driving circuit, and a second signal line for signal transmission with the data driving circuit, the conductive member comprises a connector for signal transmission between the data PCB and the gate PCB, and the connector and the first and the second signal lines are located in and out of the sealant

Claim 58:

- forming a conductive member including a light transmissive portion on a first substrate
- forming a black matrix on a second substrate
- forming a sealant overlapping the light transmissive portion
- wherein the conductive member comprises a connector for signal transmission between a data driving circuit and a gate driving circuit

Claims 59-64 are allowed since they depend on the allowed claim 58.

Claim 65:

- a first panel including a conductive layer
- a second panel spaced apart from the first panel by a predetermined gap and including a black matrix
- a sealant disposed between the first panel and the second panel and overlapping the black matrix
- wherein the conductive layer has a plurality of slits located at the overlapping and elongated along a signal transmission of the conductive layer, and the conductive layer comprises a connector for signal transmission between a data driving circuit and a gate driving circuit

Claims 66-68 are allowed since they depend on allowed claim 65.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Park et al (US 2001/0026345) disclose a liquid crystal display comprising a first panel including a conductive; a second panel spaced apart from the first panel by a predetermined gap; a sealant disposed between the first panel and the second panel and overlapping the conductive member; wherein the conductive member comprises a connector for signal transmission between a data driving circuit and a gate driving circuit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
